

Core offer

What we provide

- Power: gas-engine generation integrated with PV, BESS, and EMS
- Fuel: LNG/CNG/LPG virtual pipeline and onsite fuel handling
- Operations: monitoring, alarm response, and remote performance tuning
- Delivery: packaged solution, integrated EPC, or phased rollout

01 | Problem we solve

- Project execution is fragmented across fuel, logistics, storage, and power interfaces
- Weak-grid locations require rapid deployment, but multi-vendor handoffs delay delivery
- Limited lifecycle visibility increases downtime exposure and total operating risk

02 | Key strengths (EN)

- Gas generator portfolio from 22kW to 2000kW, adaptable to diverse industrial load profiles
- CIMC containerized manufacturing and integration capability enables standardized delivery
- Mobile Solar Container (20-foot): foldable PV rail design with up to 100kWp capacity
- Containerized ESS solutions: supports 40-foot battery container deployment for utility-scale projects

03 | Delivery flow + value

04 | Customer selection (fill and send back)

Please choose solution type(s):

- Gas Generator System
- Industrial-scale Energy Storage (BESS)
- Integrated Gas + Solar + Storage System
